PROFESSIONAL SUMMARY

AI/ML Engineer with 7+ years of experience in Computer Vision and Edge AI, holding an MSc in Artificial Intelligence (with Distinction) from the University of Southampton. Progressed from junior deep learning engineer to leading CV teams at riset.ai, and applying automated video analytics at Boon AI. Specialize in end-to-end edge AI systems, including ADAS, dashcam video intelligence, and real-time model optimization on NVIDIA Jetson architectures. Proven track record of bridging perception models with resource-constrained deployment to solve autonomous and driver safety challenges.

CORE COMPETENCIES

Edge AI & TensorRT

ADAS & Object Detection

Real-time Video Analytics

Model Optimization (Pruning)

PyTorch & TensorFlow

Autonomous Perception

End-to-End MLOps

WORK EXPERIENCE

PT Jelajah Data Semesta (JDS) -- Bali Tower Group

May 2026 -- Present

AI Engineer (Assistant Manager)

- Lead a video analytics project.
- Develop and integrate deep learning models into production systems.

Boon AI

Jan 2026 -- Apr 2026

AI/ML Engineer

- Developed Computer Vision models for automated take-off, specialising in high-precision material quantification.
- Architected end-to-end inference pipelines, integrating deep learning outputs into the core platform for automated processing.

PT Riset Kecerdasan Buatan (riset.ai)

Aug 2017 -- Sep 2024

Lead Artificial Intelligence Engineer

- Designed and deployed computer vision pipelines for industrial and surveillance applications, integrating object detection, activity recognition, and tracking models for real-time video analytics.
- Led model optimisation for edge deployment, dataset management (CVAT, Streamlit), and production infrastructure using Docker.
- Built an end-to-end automatic license plate recognition (ALPR) pipeline with 95% accuracy using CCTV camera feeds.
- Developed medical imaging models (U-Net, DenseNet) for COVID-19 detection, securing a published patent.

KEY PROJECTS

Autonomous Tram Perception System

ADAS

Engineered collision-avoidance assist on Jetson AGX Xavier. Built rail detection, object detection, and depth estimation models optimized for edge hardware limits. Registered copyright (EC00202213494, 2022).

Monocular Depth Estimation with Lane & Object Detection

Dissertation

MSc Dissertation exploring perception models for autonomous vehicles, directly applicable to dashcam video intelligence and ADAS scenarios.

Face Recognition & Identification

Optimization

Improved Indonesian face recognition from 80% to 95% accuracy for real-time video feeds. Employed PyTorch and OpenCV optimizations for live streaming.

EDUCATION

Master of Science (With Distinction): Artificial Intelligence University of Southampton -- UK LPDP Scholarship Awardee. Modules: Deep Learning & Neural Networks, Computer Vision, Foundations of AI.	Sep 2024 -- Sep 2025
Bachelor of Science: Electrical Engineering Institut Teknologi Bandung -- Indonesia	Aug 2013 -- Jul 2017

TECHNICAL SKILLS

Languages: Python, OpenCV, NumPy, Matplotlib **Frameworks:** PyTorch, TensorFlow, TensorRT
Infrastructure: Docker, Git, Linux, AWS, GCP **Edge Devices:** Jetson Nano, Jetson Orin NX, Jetson AGX Xavier
Computer Vision: Object Detection, Segmentation, Activity Recognition, Real-time Inference
